Professional Summary

Fresher Generative AI engineer (B.E. Computer Engineering, 2025) with a GitHub portfolio of working GenAI projects: a RAG document-search application, an AI chatbot for enterprise workflows, and an LLM evaluation pipeline. Strong in Python, LangChain, embeddings, vector databases and SQL. Hackathon 1st Runner-up. Eager to build real enterprise AI solutions with senior AI engineers.

Technical Skills

- **Generative AI & NLP:** LLM applications, RAG, chatbots, Agentic AI, prompt engineering, embeddings, semantic search, Text-to-SQL, LLM evaluation (LLM-as-a-judge), Google Gemini API
- **AI Frameworks:** LangChain
- **Vector Databases:** ChromaDB, pgvector
- **Programming:** Python, FastAPI, Flask, SQL, JavaScript (ES6+), Node.js
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Tools & Cloud:** Git, GitHub, GitHub Actions (CI/CD), GitLab, REST APIs, Postman, Docker basics, AWS basics

Projects

MedEcho – RAG Document Search and Conversational Analytics *Python, LangChain, ChromaDB, LLMs, MongoDB*

- Built a document-grounded RAG application: documents are converted to embeddings and stored in a vector database, so the LLM answers from real data with fewer wrong answers.
- Added conversational querying of structured data (Text-to-SQL) and persistent session memory.
- Built the full-stack app with React, Node.js, JWT login and 12+ REST API endpoints; MongoDB indexing made queries 30% faster.

Enterprise ReferralBot – AI Chatbot for Enterprise Workflows *Python, FastAPI, Gemini, Cloud Functions*

- Built a smart chatbot that understands natural language, detects user intent with Google Gemini and routes each request to the right workflow.
- Connected the chatbot to backend systems with REST APIs, webhooks and cloud functions, with validation, logging and automatic retries.
- Improved transaction throughput by 35% and wrote documentation for the team.

LLM Evaluation and CI/CD Pipeline *Python, GitHub Actions, Docker Basics, Gemini API*

- Built an LLM-as-a-judge framework that scores hallucination and answer relevance, run automatically in CI/CD on every change.
- Tracked latency and cost estimates, and created dashboards to monitor quality.
- Reduced manual checking and release time by 40%.

AI-Driven Reporting Application – COMSYS Hackathon 2024 *Python, SQL, LLMs*

- Built an AI-driven reporting application in a team hackathon; won **1st Runner-up**.

Experience

Mira Advanced Engineering, Mumbai, Maharashtra *Jan 2024 – Feb 2024*
Software Engineering Intern

- Built backend REST APIs, wrote SQL queries, and fixed 20+ functional defects to improve reliability.
- Worked with stakeholders on requirements, used Git in an Agile/Scrum team, and took part in code reviews.

Education

Marathwada Mitra Mandal's Institute of Technology, Pune *Graduated 2025*
B.E. in Computer Engineering CGPA: 7.65 / 10

Certifications & Achievements

- IBM Professional Certificates: RAG and Agentic AI (in progress); SQL Certificate
- Oracle Certified Foundations Associate: Agentic AI (Valid Aug 2026 – Aug 2028)
- COMSYS Hackathon 2024: 1st Runner-up
- Winner, Campus Bug Bounty Competition (1st among 50+ participants)
